p. 5 & 6. List of works on means of Distribution.

36 fruits eaten by birds on trees — those chiefly
(p. 160)
thick to tough coats on bushes or Herbs.

80 fruits with bristles (by cattle)

164. wonderfully many adaptations for scattering seeds
fleshy fruits never open.

167. fruits which do not open have only 1 seed.
112. fruit do not become coloured until almost ripe. (like calyx of Polygala) & shell of seed hard as a protection

114. good remarks on coloured fruit.
116 wonderful economy in the means for distribution — utility superfluous & very 2 ways — compared to the female flowers
129 — Bean on which usually (2)
144. Cases of same sp. with 2 means of Distribution
145. means often differ much in allied plants.

150 when many seedlings of same sp. struggle together all weakened, but different sp. will exist there more easily — & thence good of Distribution.

151 & prevents close interbreeding
